Encore® Automatic Powder Spray Guns

Safety

Read and follow these safety instructions. Task- and equipment-specific warnings, cautions, and instructions are included in equipment documentation where appropriate.

Make sure all equipment documentation, including these instructions, is accessible to all persons operating or servicing equipment.

Qualified Personnel

Equipment owners are responsible for making sure that Nordson equipment is installed, operated, and serviced by qualified personnel. Qualified personnel are those employees or contractors who are trained to safely perform their assigned tasks. They are familiar with all relevant safety rules and regulations and are physically capable of performing their assigned tasks.

Intended Use

Use of Nordson equipment in ways other than those described in the documentation supplied with the equipment may result in injury to persons or damage to property.

Some examples of unintended use of equipment include

- using incompatible materials
- making unauthorized modifications
- removing or bypassing safety guards or interlocks
- using incompatible or damaged parts
- using unapproved auxiliary equipment
- operating equipment in excess of maximum ratings

Regulations and Approvals

Make sure all equipment is rated and approved for the environment in which it is used. Any approvals obtained for Nordson equipment will be voided if instructions for installation, operation, and service are not followed.

All phases of equipment installation must comply with all federal, state, and local codes.
**Personal Safety**

To prevent injury follow these instructions.

- Do not operate or service equipment unless you are qualified.
- Do not operate equipment unless safety guards, doors, or covers are intact and automatic interlocks are operating properly. Do not bypass or disarm any safety devices.
- Keep clear of moving equipment. Before adjusting or servicing any moving equipment, shut off the power supply and wait until the equipment comes to a complete stop. Lock out power and secure the equipment to prevent unexpected movement.
- Relieve (bleed off) hydraulic and pneumatic pressure before adjusting or servicing pressurized systems or components. Disconnect, lock out, and tag switches before servicing electrical equipment.
- Obtain and read Material Safety Data Sheets (SDS) for all materials used. Follow the manufacturer’s instructions for safe handling and use of materials, and use recommended personal protection devices.
- To prevent injury, be aware of less-obvious dangers in the workplace that often cannot be completely eliminated, such as hot surfaces, sharp edges, energized electrical circuits, and moving parts that cannot be enclosed or otherwise guarded for practical reasons.

**Fire Safety**

To avoid a fire or explosion, follow these instructions.

- Do not smoke, weld, grind, or use open flames where flammable materials are being used or stored.
- Provide adequate ventilation to prevent dangerous concentrations of volatile materials or vapors. Refer to local codes or your material SDS for guidance.
- Do not disconnect live electrical circuits while working with flammable materials. Shut off power at a disconnect switch first to prevent sparking.
- Know where emergency stop buttons, shutoff valves, and fire extinguishers are located. If a fire starts in a spray booth, immediately shut off the spray system and exhaust fans.
- Clean, maintain, test, and repair equipment according to the instructions in your equipment documentation.
- Use only replacement parts that are designed for use with original equipment. Contact your Nordson representative for parts information and advice.
**Grounding**

**WARNING:** Operating faulty electrostatic equipment is hazardous and can cause electrocution, fire, or explosion. Make resistance checks part of your periodic maintenance program. If you receive even a slight electrical shock or notice static sparking or arcing, shut down all electrical or electrostatic equipment immediately. Do not restart the equipment until the problem has been identified and corrected.

Grounding inside and around the booth openings must comply with NFPA requirements for Class II Division 1 or 2 Hazardous Locations. Refer to NFPA 33, NFPA 70 (NEC articles 500, 502, and 516), and NFPA 77, latest conditions.

- All electrically conductive objects in the spray areas shall be electrically connected to ground with a resistance of not more than 1 meg ohm as measured with an instrument that applies at least 500 volts to the circuit being evaluated.
- Equipment to be grounded includes, but is not limited to, the floor of the spray area, operator platforms, hoppers, photo eye supports, and blow-off nozzles. Personnel working in the spray area must be grounded.
- There is a possible ignition potential from the charged human body. Personnel standing on a painted surface, such as an operator platform, or wearing non-conductive shoes, are not grounded. Personnel must wear shoes with conductive soles or use a ground strap to maintain a connection to ground when working with or around electrostatic equipment.
- Operators must maintain skin-to-handle contact between their hand and the gun handle to prevent shocks while operating manual electrostatic spray guns. If gloves must be worn, cut away the palm or fingers, wear electrically conductive gloves, or wear a grounding strap connected to the gun handle or other true earth ground.
- Shut off electrostatic power supplies and ground gun electrodes before making adjustments or cleaning powder spray guns.
- Connect all disconnected equipment, ground cables, and wires after servicing equipment.

**Action in the Event of a Malfunction**

If a system or any equipment in a system malfunctions, shut off the system immediately and perform the following steps:

- Disconnect and lock out electrical power. Close pneumatic shutoff valves and relieve pressures.
- Identify the reason for the malfunction and correct it before restarting the equipment.

**Disposal**

Dispose of equipment and materials used in operation and servicing according to local codes.
Description

Encore® automatic electrostatic powder spray guns are available in tube-mount or bar-mount versions. The 152.4 cm (5-ft) tube-mount gun is standard; an optional 182.8 cm (6-ft) tube-mount gun is available. The bar-mount gun includes a swivel mount that fits into the end of the optional gun bar.

The guns are equipped with a 100 kV integral voltage multiplier and electrode air-wash to prevent powder from collecting on the electrode. The guns have a straight-through powder path to minimize impact fusion and a quick-disconnect powder hose connector for quick color change.

The guns can be used with the Nordson iControl® system or Encore LT automatic controllers, which provide electrostatic voltage control, electrode air-wash air, and powder pump air.

Flat spray nozzles with 2.5 and 4-mm slots are shipped with the guns. Optional equipment includes:

- 8, 12, and 16-meter (26, 39, 52-ft) control cables
- Standard, pivoting, and fixed extrusion gun mounts for tube-mount guns
- Gun bar with 4-foot (121-cm) bar and clamp for 25-mm (1-in.) mounting bars
- Angled spray extensions
- Ion collector kit
- A variety of flat, conical, and cross-cut nozzles

Encore Automatic Spray Guns

Applicator Certification Label

FOR Electrostatic Finishing Applications
Class II Spray Material

FOR USE WITH ENCORE iCONTROL WHEN CONFIGURED
IN ACCORDANCE WITH 1107770, ENCORE iCONTROL 2
WHEN CONFIGURED IN ACCORDANCE WITH 10012067
OR ENCORE XT MANUAL CONTROLS WHEN
CONFIGURED IN ACCORDANCE WITH 1084547

FM11ATEX0056X EN 50050–2

Serial Number Label

NOTE: The gun serial number contains the location, year, and month it was
manufactured. The serial number starts with “AA10A”. The “AA” means the
product was built in Amherst, Ohio, the “10” meaning the year 2010. The
“A” means the month of January, “B” would be February, and so on.

Special Conditions for Safe Use

- The Encore automatic applicator shall only be used with the associated
Encore LT controllers, Encore iControl 2, or Encore XT controllers over
the ambient temperature range of +15°C to +40°C.
- The equipment must be installed in accordance with standard EN50177.
- When used with the Encore XT controllers, equipment may only be used
in areas of low impact risk.
- Caution should be taken when cleaning plastic surfaces of the
controllers. There is a potential for static electricity buildup on thes
components.
Dimensions and Weights

Bar-Mount Gun
Weight: 651 grams (1.44 lbs)

5-ft Tube Mount Gun
Weight: 2.02 kg (4.45 lbs)

6-ft Tube Mount Gun
Weight: 2.37 kg (5.23 lbs)

Figure 2  Encore Automatic Gun Dimensions and Weights
Installation

Tube-Mount Guns

See Figure 3. Mount the tube-mount gun on a fixed gun stand, oscillator, or reciprocator using one of the mounting kits as shown below. Refer to page 45 for the tube mount assembly part numbers.

Figure 3  Tube-Mount Gun Mounting Assemblies

7. Support plate
8. 3/8-16 x 1-in. long screws
9. T-slot nuts
10. T-slot extrusion (see Note)

A. Clamping handle
B. Pivot handle

Note: Not included in kit.

Bar-Mount Guns

See Figure 4. Install the gun bar-mount adapter (3) into the end of the adjusting rod (9) and secure it by tightening the set screw (11) with a 4-mm hex key. Refer to page 47 for the gun bar part number.

- To move the gun tip from side to side, loosen the right button screw (1).
- To tilt the gun tip up or down, loosen the tilt knob (4).
- To rotate the adjusting bar on the locking body (8) axis or in the locking body, loosen the rotate handle (5).
Bar-Mount Guns (contd)

To mount the gun on a fixed gun stand, oscillator, or reciprocator, position the clamp (7) on a 1 inch mounting bar and tighten the clamp handle (6).

9. Adjusting rod
10. Ball
11. Set screw

Gun Connections

See Figure 5.

1. Connect the powder feed hose to the hose connector (2). The connector can be disconnected from the gun by unscrewing and pulling back on the retainer nut (1).

2. Connect 4-mm clear electrode air-wash tubing to the barbed fitting (3) (bar-mount gun) or tubing union (4) (tube-mount gun).

3. Connect the gun cable to the receptacle (5) and tighten the cable nut securely.
Figure 5  Gun Connections – Bar Mount and Tube-Mount Guns
1. Retainer nut  3. Barbed fitting  5. Gun cable receptacle
2. Hose connector  4. Tubing Union (4-mm)

**Ion Collector Installation**

The ion collector can improve the smoothness and appearance of cured powder coatings. It collects ions emitted from the gun’s charging electrode instead of allowing them to deposit on the part. This reduces the rate of charge buildup in the powder deposited on the part, which may reduce defects in the cured coating such as pin-holing and orange peel.

Refer to page 48 in the Parts section for the kit part number.

The ion collector kit can be used on both the bar-mount and tube-mount guns. After installing the ion collector, adjust the collector rod position for best results as described in *Adjusting the Ion Collector Rod*.

**Bar Mount Gun**

1. See Figure 6. Insert the collector rod (1) into the grounding plate and secure it with the M5 x 8 set screw (6) included in the ion collector kit.

2. Attach the multi-point tip (7) to the collector rod with the M3 x 8 screw (8).
Tube-Mount Gun

**NOTE:** The mounting hole must remain plugged for optimal performance. If the ion collector is removed, replace it with the appropriate plug. The mounting plug part number is listed in the *Parts* section of this manual.

**NOTE:** The ion collector mounting hole must be installed towards the front of the gun as shown in Figure 7. If the ion collector hole is installed towards the far rear, it must be reversed to allow access to the grounding plate in the rear body assembly. Perform Steps 1–7 of the tube-mount dis-assembly procedure on page 26 to remove the tube, then turn it around and re-assemble the gun.

1. Remove the plug from the mounting hole (5) if applicable.
2. Secure the post (2) to the grounding plate with the socket head screw (3).
3. Insert the collector rod (1) into the post and secure it with the M10 x 10 nylon-tipped set screw (4).
4. Attach the multi-point tip (7) to the collector rod with the M3 x 8 screw (8).

![Figure 7 Ion Collector Installation – Tube Mount Gun](image)

- 1. Collector rod
- 2. Post
- 3. Socket-head screw
- 4. M10 x 10 set screw
- 5. Ion collector mounting hole
- 6. M5 x 8 set screw
- 7. Multi-point tip
- 8. M3 x 8 pan-head screw

Adjusting the Ion Collector Rod

The ion collector rod should be mounted so that the tip at the end of the rod is the optimum distance from the tip of the electrode for the application.

- If the tip at the end of the rod is too far away from the tip of the electrode, the ion collector will not collect any ions or improve the appearance of the cured coating.
- If the tip of the end of the rod is too close to the tip of the electrode, powder particles may not be charged efficiently and the powder transfer efficiency may be reduced.
Use this procedure to position the end of the ion collector rod.

1. Remove the rod and multi-tip point from the gun, then coat several parts. Note the current (μA) shown on the control unit display when coating the parts. Cure the coatings.

2. Install the rod and multi-point tip on the gun.

3. Loosen the set screw (4 or 6) and move the end of the rod far away from the front end of the gun.

4. Turn on the electrostatic voltage and spray powder with a part in front of the gun. Slide the rod forward until the current shown on the control unit display is 5 to 7 μA higher than that displayed in step 1. Tighten the set screw.

5. Cure the coating on the test parts. Compare the surface finish on these parts with the finish on the parts coated in step 1 (before the ion collector kit was installed).

6. If the desired improvement in the surface finish has not been obtained, loosen the set screw and slide the rod forward approximately 1-in. Tighten the set screw.

7. Repeat steps 5 and 6 until the desired improvement in surface finish is obtained.
Operation

**WARNING:** Allow only qualified personnel to perform the following tasks. Follow the safety instructions in this document and all other related documentation.

**WARNING:** This equipment can be dangerous unless it is used in accordance with the rules laid down in this manual.

Automatic and manual control of electrostatic output, air-wash air flow, and pump air flow, are provided by the Nordson iControl system or the Encore LT automatic controllers. Gun triggering and positioning are provided by the iControl system, a Nordson axis controller, or a PLC supplied either by Nordson or the customer.

Refer to your controller manual for programming information and instructions.
Changing Flat Spray Nozzles

**WARNING:** Turn off the spray gun and ground the electrode before performing this procedure. Failure to observe this warning could result in a severe electrical shock.

1. See Figure 8. Unscrew the nozzle nut (1) counterclockwise.
2. Pull the flat spray nozzle (2) off the electrode assembly (3).

**NOTE:** It is not necessary to remove the electrode assembly. If the electrode assembly comes out of the gun when you pull the nozzle off, clean it with compressed air before re-installing it. Do not bend the electrode. The electrode holder (3A) screws into the assembly. Both the holder and the electrode are replaceable.

3. Install a new nozzle on the electrode assembly, being careful not to bend the electrode. The nozzle is keyed to the electrode assembly.

4. Install the nozzle nut over the nozzle and screw it onto the gun body clockwise until the face of the nozzle nut bottoms against the shoulder of the gun body.

**NOTE:** The tapered electrode holder of the electrode assembly has been designed for optimized cleaning during color changes on systems using flat spray nozzles. This tapered electrode holder will not accept conical deflectors.

---

![Figure 8](image_url)  
**Figure 8** Flat Spray Nozzle Removal and Installation
Changing Optional Deflectors and Conical Nozzles

**WARNING:** Turn off the spray gun and ground the electrode before performing this procedure. Failure to observe this warning could result in a severe electrical shock.

**NOTE:** The electrode holder shipped with the gun will need to be changed in order to accept the optional conical deflectors. See the Options section beginning on page 39 for the conical nozzle kit required for this conversion.

1. See Figure 9. To change the deflector (4), gently pull it off the electrode assembly (3). If only changing the deflector, install the new one on the electrode assembly, being careful not to bend the electrode wire.

2. To change the entire nozzle, unscrew the nozzle nut (1) counterclockwise.

3. Pull the conical nozzle (2) off the electrode assembly.

**NOTE:** It is not necessary to remove the electrode assembly (3) from the gun. If the electrode assembly comes out of the gun when you pull the nozzle off, clean it with compressed air before re-installing it. Do not bend the electrode. The electrode holder (3A) screws into the assembly. Both the holder and the electrode are replaceable.

4. Install a new conical nozzle on the electrode assembly. The nozzle is keyed to the electrode assembly.

5. Screw the nozzle nut onto the gun body until the face of the nozzle nut bottoms against the shoulder of the gun body.

6. Install a new deflector on the electrode assembly, being careful not to bend the electrode.

![Figure 9 Changing Optional Deflectors and Conical Nozzles](image-url)
Maintenance

**WARNING:** Turn off the electrostatic voltage and ground the gun electrode before performing the following tasks. Failure to observe this warning could result in a severe shock.

**Daily Maintenance**

**NOTE:** Depending on your application, you may not need to perform this procedure every day. If you regularly perform color changes with a powder feed center, the spray gun is purged internally each time a color change is performed. If this is the case, perform this procedure every 2–3 days.

See Figure 10.

1. Purge the spray guns, then shut them off.
2. Disconnect the powder feed hose (A) from the powder pump. Blow any remaining powder out of the powder feed hose and spray gun with an OSHA-approved, low-pressure air gun. Never blow air through the powder feed hose from the spray gun into the powder pump.
3. Unscrew the nozzle nut (1) and remove the nozzle (2).
4. Pull the electrode assembly (3) out of the gun.
5. Disconnect the powder feed hose from the gun by unscrewing the hose retainer nut (27), pulling back on the nut, and pulling the hose connector (26) off the powder tube.
6. Push the powder tube (5) toward the front of the gun, then pull the seal (4) and tube out of the front of the gun.

**Daily Maintenance (contd)**

7. Clean all parts removed with a low-pressure blow gun. Wipe the parts with a clean, dry cloth.

8. Carefully remove any fused powder with a wooden or plastic dowel or similar tool. Do not use tools that will scratch the plastic. Powder will build up and impact-fuse on scratches.

**NOTE:** If necessary, use a cloth dampened with isopropyl or ethyl alcohol to clean the parts. Remove O-rings and seals before cleaning the parts with alcohol. Do not immerse the spray gun in alcohol. Do not use any other solvents.

9. Inspect the powder tube, seal, electrode assembly, and nozzle for wear. Replace worn or damaged parts.

10. Install the seal on the end of the powder tube if removed.

11. Install the powder tube into the gun until the seal bottoms out in the front of the gun.

12. Install the electrode assembly in the gun, so that the end of the electrode assembly slides into the seal on the end of the powder tube.

13. Install the nozzle on the electrode assembly and secure it with the nozzle nut. If used, install the deflector onto the electrode assembly.
Troubleshooting

**WARNING:** Allow only qualified personnel to perform the following tasks. Follow the safety instructions in this document and all other related documentation.

These troubleshooting procedures cover only the most common problems. Refer to the iControl Hardware Manual for control-related problems. If you cannot solve a problem with the information provided in these manuals, contact your local Nordson representative for help.

**NOTE:** iFlow® modules are used in the iControl controller to control pump air flow. Refer to your iControl manuals for problems related to iFlow modules.

</table>
**Power Supply Resistance Test**

Use a megohm meter to check the resistance of the power supply, from the J2−3 feedback terminal at the connector to the contact pin inside the front end. The resistance should be between 225−335 megohms. If the reading is infinite, switch the meter probes. If the resistance falls outside this range, replace the power supply.

**NOTE:** There are multiple variables that can affect the Meg−Ohm readings of your meter (temperature and measurement voltage). If the Meg−Ohm meter output voltage differs from the 500 VDC setting, it will have a direct impact on the measurement accuracy. Measurements should also be taken at room temperature 22 °C or 72 °F. Allow time for the multiplier to cool to room temperature for repeatable results.

![Diagram of Power Supply Resistance Test](image)

**Figure 11  Power Supply Resistance Test**
**Electrode Assembly Resistance Test**

Use a meg ohm meter to measure the resistance of the electrode assembly from the contact ring on the back to the antenna wire in the front. The resistance should be 19–21 meg ohms. If the resistance is out of this range replace the electrode assembly.

![Electrode Assembly Resistance Test Diagram](image)

**Figure 12  Electrode Assembly Resistance Test**

**Cable Continuity Tests**

Use a standard ohmmeter to check the gun cables and harness for continuity.

**Gun Receptacle Harness**

This harness is used on both the bar-mount and tube-mount guns to connect the power supply (voltage multiplier) to the extension cable (tube-mount gun) or gun cable.

![Gun Receptacle Harness](image)

**Figure 13  Gun Receptacle Harness**

**Gun Extension Cable**

This cable is used in the tube-mount gun only, between the rear body assembly and the end cap.
Figure 14  Gun Extension Cable
Gun Cable

This cable is available in 8, 12, and 16-meter (26, 39, 52 ft) lengths. It is used for both bar-mount and tube-mount guns.

Figure 15  Gun Cable
Repair

**WARNING:** Allow only qualified personnel to perform the following tasks. Follow the safety instructions in this document and all other related documentation.

**Powder Wear Parts Replacement**

Use this procedure to replace the powder wear parts on both the tube-mount and bar-mount guns. Replace worn or damaged parts as required.

1. See Figure 16. Unscrew the retainer nut (27) and pull the hose connector (26) off the powder tube.

2. Unscrew the nozzle nut (1) and remove the nozzle (2) and electrode assembly (3). Inspect the nozzle and electrode assembly and replace worn or damaged parts.

3. Push on the rear end of the powder tube (5) and pull it out of the front of the gun. Inspect the seal (4) and replace it if it is damaged or deformed.

4. Install the seal on the powder tube, then install the powder tube into the spray gun body and push it through until the seal seats in the front of the body.

5. Install the electrode assembly and nozzle and secure them with the nozzle nut.

6. Install the hose connector onto the end of the powder tube and tighten the retainer nut to secure the hose connector.

![Figure 16 Powder Wear Parts Replacement](image-url)
**Tube-Mount Gun Repair**

**Tube-Mount Gun Disassembly**

1. Remove the nozzle, electrode assembly, hose connector, and powder tube as described in *Powder Wear Parts Replacement* on page 25.

2. See Figure 17. Disconnect the union (25) from the clear 4-mm air tubing (18).

3. Disconnect the gun cable (not shown) from the cable receptacle (20).

4. Unscrew the clamping tube nut (24) from the clamping tube (21).

5. Remove the nut and lock washer from the cable receptacle (20). Save the nut and lock washer for reuse.

6. Pull the end cap (23) off the end of the gun.

7. See Figure 18. Pull the mounting tube (22) off the rear body assembly (14) and over the clamping tube (21).

8. Unscrew the clamping tube from the rear body assembly.

9. Disconnect the extension cable (19) from the receptacle harness (15).

10. Disconnect the clear 4-mm air tubing (18) from the barbed fitting (13).

11. If you are replacing the extension cable, remove the cable receptacle (20). If not, you can leave them connected.

---

**Figure 17**  Tube-Mount Gun Disassembly 1 of 5

- 19. Extension cable
- 20. Cable receptacle
- 21. Clamping tube
- 22. Mounting tube
- 23. End cap
- 24. Clamping tube nut
- 25. Tubing union

**NOTE:** If your spray gun is equipped with an optional ion collector, you must remove it from the gun before you can remove the mounting tube.
Figure 18  Tube-Mount Gun Disassembly 2 of 5

13. Barbed fitting  
14. Rear gun body  
15. Receptacle harness

18. Clear 4-mm tubing  
19. Extension cable  
20. Cable receptacle  
21. Clamping tube  
22. Mounting tube

12. See Figure 19. Remove the two socket-head screws (17) and lock washers (17A) from the rear gun body (14).

13. Carefully pull the rear gun body far enough off the bulkhead (8) to disconnect the power supply harness (11) from the receptacle harness (15), and the filter assembly tubing (6A) from the barbed fitting inside the rear body.

Figure 19  Tube-Mount Gun Disassembly 3 of 5

6A. Filter assembly tubing  
8. Bulkhead

11. Power supply harness  
14. Rear gun body  
15. Receptacle harness  
17. Socket-head screws  
17A. Lock washers

14. See Figure 20. With a \( \frac{1}{8} \)-in. hex key, remove the two Allen nuts (10) and screw plate (9) from the bulkhead (8). Then remove the bulkhead from the gun body (6), feeding the power supply harness through the bulkhead.
**Tube-Mount Gun Disassembly (contd)**

15. Slide the power supply (11) out of the gun body.

16. The clear 4-mm air tubing (6A) in the gun body is part of the air filter assembly that provides the electrode air-wash. To replace the air filter assembly, pull it out of the front of the gun body.

17. The gasket (7) is attached to the bulkhead with a pressure-sensitive adhesive. If the gasket is damaged, replace it with a new one.

* Install with Loctite 222

18. See Figure 21. To disassemble the rear body assembly, remove the screw (12) and barbed fitting (13) from inside the rear gun body (14). A 3-mm hex key and 1/4-in. deep-well socket are required.

19. Remove the nut (15A) from the receptacle, pull the grounding plate (16) off the rear gun body, and feed the receptacle harness through the body.

**NOTE:** When reassembling, secure the ring-tongue ground terminal to the rear gun body with the screw (12) and lock washer (12A) and torque the screw to 2.5 N•m (22 inch-lbs).
Tube-Mount Gun Assembly

**NOTE:** If you have a kit that combines the power supply and body assembly, skip step 1 and go to step 2.

1. See Figure 20. Install the power supply (11) into the gun body (6), making sure the gun body rib fits into the groove on the power supply. Seat the power supply firmly into the gun body.

2. Feed the power supply harness through the bulkhead (8), then install the bulkhead and screw plate (9) over the gun body studs. Apply Loctite 222 thread-locking adhesive to the Allen nuts (10) and thread them onto the studs. Torque the nuts to 0.45 N•m (64 inch-ounces) with a 1/8-in. hex key.

3. See Figure 19. Connect the receptacle harness (15) to the power supply harness (11). Tuck the harness connectors (11, 15) into the rear body assembly in the positions shown.

4. Connect the filter assembly tubing (6A) to the barbed fitting on the inside of the rear body. Feed any extra clear air tubing into the gun body, then install the rear body onto the bulkhead with the screws (17) and lock washers (17A).

5. See Figure 18. Screw the clamping tube (21) into the rear body (14).

6. Connect the extension cable (19) to the receptacle harness in the rear body assembly.

7. Connect the clear 4-mm tubing (18) to the barbed fitting on the rear body assembly.

8. Orient the mounting tube (22) with the ion collector hole facing towards the front of the gun.

**NOTE:** If the ion collector was previously installed towards the far rear of the assembly, position the mounting hole towards the front of the gun. Proper orientation must be implemented to allow access to the grounding plate.

9. See Figure 17. Connect the extension cable (19) to the receptacle (20) in the end cap (23).

10. Feed the ends of the extension cable and tubing into the end of the mounting tube, then slide the mounting tube over the clamping tube and rear body assembly.

11. Install the end cap on the mounting tube, feeding the clamping tube (21) and clear 4-mm tubing (18) through the end cap.

12. Secure the cable receptacle (20) to the end cap with the lock washer and nut.

13. Thread the clamping tube nut (24) onto the clamping tube and tighten securely.

14. Install the union (25) on the clear 4-mm tubing.

15. Install the powder tube, electrode assembly, nozzle, nozzle nut, and hose connector as described in *Powder Wear Parts Replacement* on page 25.
Bar-Mount Gun Repair

Bar-Mount Gun Disassembly

1. Remove the nozzle, electrode assembly, hose connector, and powder tube as described in Powder Wear Parts Replacement on page 25.

2. Remove the two socket-head screws (17) and lock washers (17A) from the rear body assembly (14).

3. Carefully pull the rear body assembly far enough off the bulkhead (8) to disconnect the power supply harness (11) from the receptacle harness (15); and the filter assembly tubing (10) from the barbed fitting inside the rear body assembly.

4. See Figure 23. With a \(\frac{1}{8}\)-in. hex key, remove the two Allen nuts (10) and screw plate (9) from the bulkhead (8). Then remove the bulkhead from the gun body (6), feeding the power supply harness through the bulkhead.

5. Slide the power supply (11) out of the gun body.

6. The tubing (6A) in the gun body is part of the air filter assembly that provides the electrode air-wash. To replace the air filter assembly, pull it out of the front of the gun body.

7. The gasket (7) is attached to the bulkhead with pressure sensitive adhesive. If the gasket is damaged, replace it with a new one.
* Install with Loctite 222

Figure 23  Bar-Mount Gun Disassembly 2 of 3

6. Clear 4-mm tubing  
6A. Filter assembly tubing  
7. Gasket

6. See Figure 24. To disassemble in the rear body assembly, remove the screw (12), lock washer (12A), and barbed fitting and lock washer (13) from inside the rear body (14). A 3-mm hex key and 1/4-in. deep-well socket are required.

9. Remove the nut (15A) from the receptacle (15), pull the adapter off the rear gun body, and feed the receptacle harness through the body.

10. Inspect the quad ring (18) in the adapter (16) and replace it if damaged.

NOTE: When reassembling, secure the ring-tongue ground terminal to the rear gun body with the screw (12) and torque it to 2.5 N·m (22 inch-lbs).

16. Bar mount adapter  
18. Quad ring
Bar-Mount Gun Assembly

**NOTE:** If you have a kit that combines the power supply and body assembly, skip step 1 and go to step 2.

1. See Figure 23. Install the power supply (11) into the gun body (6), making sure the gun body rib fits into the groove on the power supply. Seat the power supply firmly into the gun body.

2. Feed the power supply harness through the bulkhead, then install the bulkhead (8) and screw plate (9) over the gun body studs. Apply Loctite 222 to the Allen nuts (10), then install the nuts on the studs and torque them to 0.45 N•m (64 inch-ounces) with a 1/8-in. hex key.

3. See Figure 22. Connect the receptacle harness (15) to the power supply harness (11). Tuck the harness connectors (11, 15) into the rear body assembly in the positions shown.

4. Connect the clear filter tubing (6A) to the barbed fitting on the inside of the rear body assembly (14). Feed any extra clear air tubing into the gun body, then install the rear body assembly onto the bulkhead with the screws (17) and lock washers (17A).

5. Install the powder tube, electrode assembly, nozzle, nozzle nut, and hose connector as described in *Powder Wear Parts Replacement* on page 25.

**NOTE**

A: Refer to the *Options* section for a complete list of available flat spray nozzles, conical nozzles and deflectors.

B: Bulk item, order in increments of one foot.

C: For use with 11 mm and 1/2 in hose.

D: For flat spray nozzle use only. Refer to the *Options* section for assemblies/parts for use with conical nozzles and deflectors.

E: The type of material used for the tube mount determines the type of spray gun.

F: Application Specific: Order part number 1609053 if a positive power supply is needed. The positive power supply is sold separately from the gun body.

AR: As Required

NS: Not Shown
Bar-Mount Gun Parts

EU DECLARATION of CONFORMITY

Product: Encore Automatic Powder Spray System
This Declaration is issued under the sole responsibility of the manufacture.

Models: Encore Automatic Applicator and Encore iControl 2

Description: The automatic electrostatic powder spray system includes applicator, control cable and associated controllers. These controls are available in a 4 - 16 applicator control cabinets as a main console with a pc and display or an auxiliary console without the pc or display. There is an optional Pedestal unit for remote mounting of the display.

Applicable Directives:
2006/42/EC - Machinery Directive
2014/30/EU - EMC Directive
2014/34/EU - ATEX Directive

Standards Used for Compliance:

Type of Protection:
- Ambient Temperature: +15°C to +40°C
- Ex II 2 D / 2mJ = Auto Applicators
- Ex II (2) D = Main Console and Auxiliary Console Controllers
- Ex II (2) 3 D = Optional Pedestal

ATEX Product Certificates:
- FM11ATEX0056X (Applicators) (Norwood, Mass. USA)
- FM13ATEX0010X (Controllers) (Norwood, Mass. USA)

ATEX Quality System Certificate
- 1180 Baseefa (Buxton, Derbyshire, UK)

Date: 11 DEC 2017

EU DECLARATION of Conformity

Models: Encore Automatic Applicator and Encore LT Automatic Controllers.

Description: The automatic electrostatic powder spray system includes applicator, control cable and associated controllers. These controls are available in a one applicator, dual applicator or a 4-8 applicator system. The manual powder electrostatic powder spray system includes applicator, control cable and associate controls. This is available in a stationary system, or in a mobile system.

Applicable Directives:
2006/42/EC - Machinery Directive
2014/30/EU - EMC Directive
2014/34/EU - ATEX Directive

Standards Used for Compliance:

Type of Protection:
- Ambient Temperature: +15ºC to +40ºC
- Ex II 2 D / 2mJ = (Manual & Auto Applicators) / Automatic Applicators are Type: A-P per EN50177
- EX II (2)3 D = (Manual & Automatic Controllers)

ATEX Product Certificates:
- FM11ATEX0056X (Applicators) (Norwood, Mass. USA)
- FM11ATEX0057X (Controllers) (Norwood, Mass. USA)

ATEX Quality System Certificate
- 1180 SGS Baseefa (Buxton, Derbyshire, UK)

This Declaration is issued under the sole responsibility of the manufacture.

Date: 15 May 18
EU DECLARATION of Conformity

Models: Encore XT Manual, Fixed Mount or Mobile Dolly unit.
Encore Auto Applicator with Encore XT controls for a single gun automatic systems.
Encore HD Manual, Fixed Mount or Mobile Dolly unit.

Description: These are all electrostatic, powder spray systems, including applicator, control cables and associated controllers. The Encore XT Manual system uses venturi style pump technology for supplying power to the spray gun. While the Encore HD Manual system uses high density pump technology for supplying power to the spray gun. The Encore Auto Gun is listed with Manual XT controls for single auto gun applications and could be mounted to a gun stand or on a robot.

Applicable Directives:

Standards Used for Compliance:

Principles:
This product has been designed & manufactured according to the Directives & standards / norms described above.

Type of Protection:
- Ambient Temperature: +15°C to +40°C
- Ex tb IIb T60°C / Ex II 2 D / 2mJ = (Encore XT and HD Applicators)
- Ex tc IIb T60°C / EX II (2) 3 D = (Controllers)
- Ex II 2 D / 2mJ = (Encore Auto Applicator)

Certificates:
- FM14ATEX0051X = Encore XT and HD Manual Applicators (Norwood, Mass. USA)
- FM14ATEX0052X = Controls (Norwood, Mass. USA)
- FM11ATEX0056X = Encore Automatic Applicator (Norwood, Mass. USA)
