

# Nordson/Fanuc Pro-Flo® II Controller with B Module I/O

## **1. Introduction**

The B-Module was created to simplify the interface between the Nordson Pro-Flo II Controller and the Fanuc robot. The B-Module will allow for one cable to be quickly connected to each end which will eliminate excessive hours of wiring and mistakes.

The Pro-Flo Controller uses signals from the robot controller and other sensors to control the gun dispensing rate. A constant bead size is maintained by adjusting the dispensing rate for changes in robot speed, material viscosity, and material delivery pressure.

**See Figure 1.** The Fanuc B-module (9) is located on the bottom of the Pro-Flo Controller unit and connects to the Fanuc robot through a sine connector (7) located on the right side of the Pro-Flo II Controller.

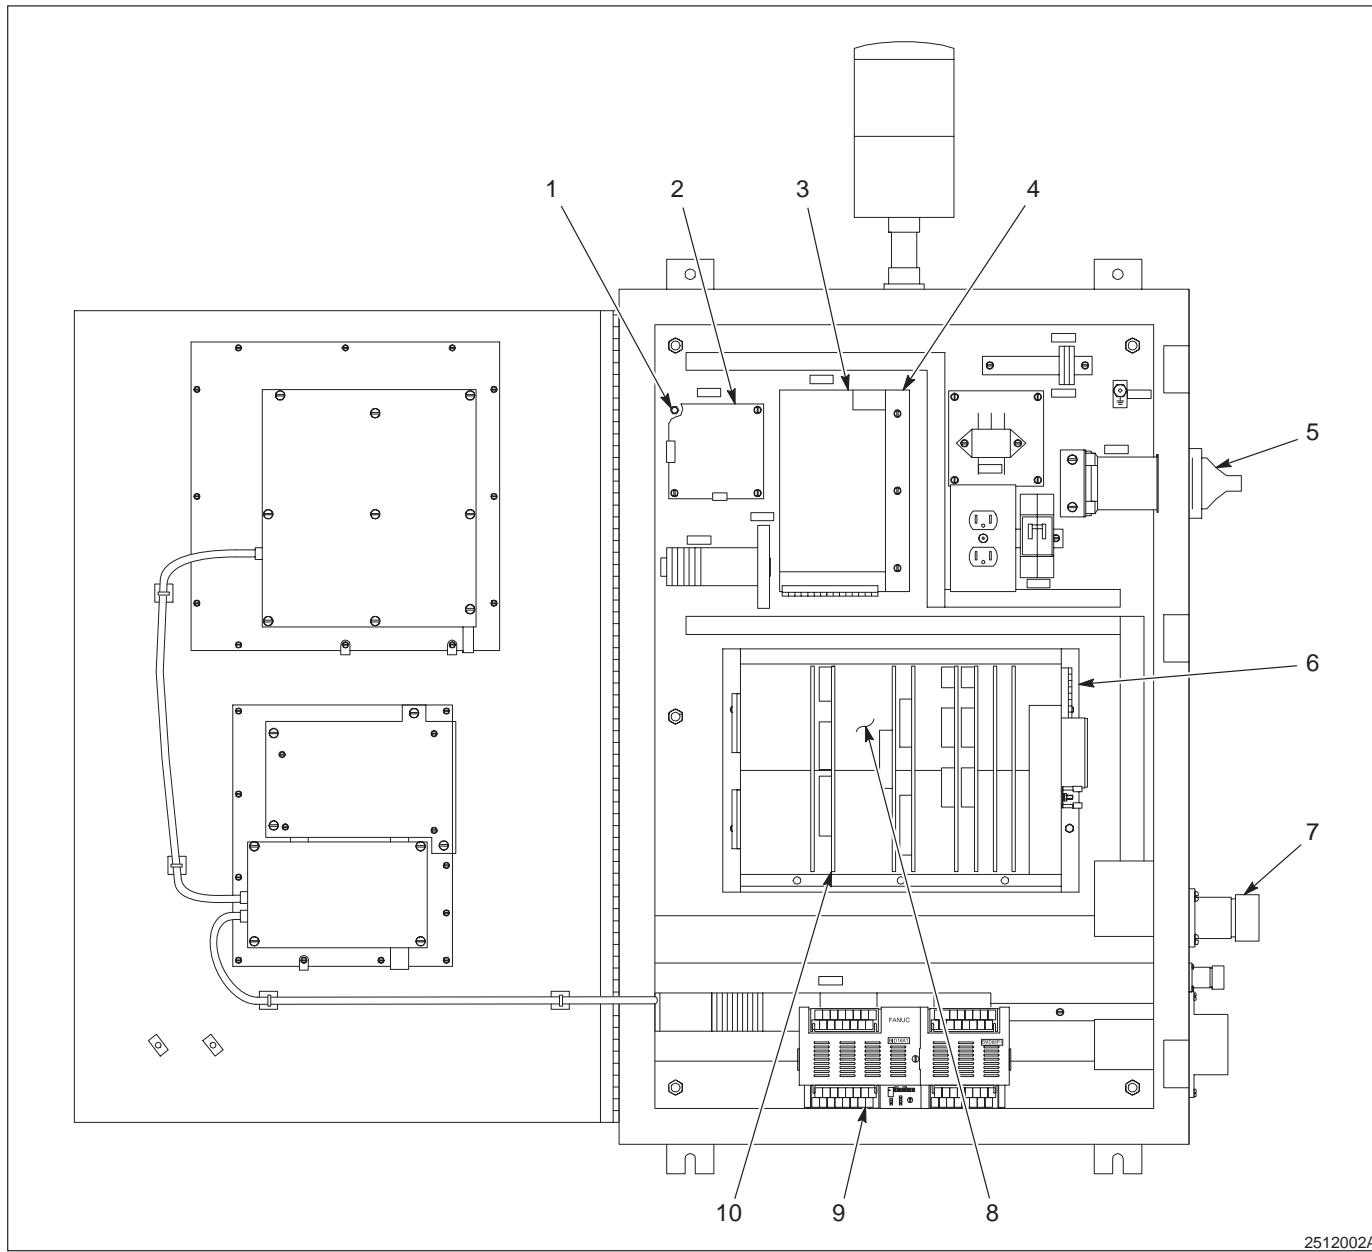

**1. Introduction (contd.)**
