

Adjustable Mounting Assembly for Automatic Guns

1. Introduction

See Figure 1. The adjustable mounting assembly for automatic guns consists of an adjusting rod (8) and a gun mounting rod (10). An adjustable mounting bracket (5) with clamp screw (3) at point B attaches the assembly to a stationary pipe or rod.

Adjustments of 360 degrees at points A, B, C, and D; and the sliding adjustment of the arm at point B, allow the assembly to be used as a universal mounting for most airless and air spray guns.
